Mathematics – Unit 1: Area and Surface Area

We are going to complete the second half of Unit 1: Area & Surface Area, lesson 12 – lesson 18. Many of the lessons at the end of Unit 1 reinforce the same concepts, which will allow for students to solidify their understanding for surface area and volume. I noticed that students are still working to master the difference between dimensions needed to calculate both area and volume. We have spent many weeks on this topic so I have decided to assign Khan Academy practice each day leading up to the Unit 1 - Test, which is schedule for **Monday, November 18th**.

Week of November 11, 2019

Oakbrook School Improvement Goals:
English Language Arts, Math,
Social Studies, Science

Spelling – Week 8

Unit 8: Word Work was sent home Friday, 11/8. Please note that 4 of the activities are to be completed at home, with parent signature acting as confirmation that each activity was completed. The contract is due Friday, November 15th. **Assessment for Units 7-9 is scheduled for: 11/25/19**

Social Studies – Conditions & Connections

We will continue with our 6th grade focus of World Geography and an emphasis on which conditions make a place more desirable. We wrapped up our lesson by looking at what a matrix and climate graph are, what they show, and how they can help us in our studies. Students will use class notes, presentations, and quizlet to prepare for the Assessment that is currently scheduled for **Wednesday, November 20th**.
